

Enable your customers to connect through safe, anonymous live person to person SMS chat and dating.

Match-making and dating have fast become a large revenue driver on the Internet and in many print publications. mBill now provides the opportunity to benefit from a portion of those chemically charged exchanges flying round - via the mobile Internet! We have developed a solution that will help you make all the necessary steps to swiftly start gaining benefit from dating and group chat via the mobile phone. It's TXTFLiRT!

Whether you want to offer TXTFLiRT via an existing dating service or site, or are starting a new presence in the mobile arena, this application is just what you need. TXTFLiRT enables live person to person SMS chat in an easy and anonymous environment. Our solution combines all the necessary features into one powerful application that is easy to use and highly configurable!

Overview

With a user friendly online administration system, you are able to configure and monitor all aspects of your TXTFLiRT application, including detailed reports of TXTFLiRT activity.

TXTFLiRT enables you to create your own unique chat rooms to suit your service and modify each of the auto-responder messages for the built in list of user commands. In addition, the system is capable of running on multiple short dial codes enabling different pricing points for male and female users.

TXTFLiRT Dating

A key aspect of this application is the ability to operate a dating/matching system where users register a profile and nickname via SMS, which is then in turn published in print media. Potential suitors reply to the published profiles to make contact with that person.

TXTFLiRT has also been developed to seamlessly integrate with existing dating/match making services online (such as a members website). In the competitive online dating market TXTFLiRT provides another point of contact for members in the anonymous, fun and easy environment of SMS messaging while earning revenue at the same time.

TXTFLiRT Group Chat

Enable users to participate in multi-user chat rooms or chat privately via SMS. Group chat provides a platform for building communities therefore encouraging further SMS usage in turn driving revenues.

Communicating via TXTFLiRT protects users identities, making them feel more comfortable to engage in an ongoing SMS exchange.

TXTFLiRT Features

- > Export user profiles for publication in print, WEB or WAP sites
- > Various pricing options
- > Compliance with industry regulators
- > Chat in rooms or in privacy

TXTFLiRT Benefits

- > Easy to export registered user profiles
- > Two pricing points can be set
- > Simple set of built in commands
- > Web based and automatic

Pricing

With international networks and large message volumes, mBill can provide competitive rates for all of our services. We are committed to maintaining competitive pricing whilst ensuring the sophistication and reliability of our superior services and solutions.

TXTFLiRT can be instantly set up once an account has been created, so contact the mBill team today for more information on this exciting solution.
